

North American 2200m QSO Stations

Please send corrections and additions to 2200m@n1bug.com

Last updated 29 July 2018

Note: km/W may be based on reported EIRP at the time of a QSO. EIRP can vary as a result of station upgrades/downgrades and environmental factors. Also, best DX may not reflect the same QSO which resulted in best km/W. Thus km/W may not always be a product of listed (usually maximum or current) EIRP and Best DX columns.

| CALL | Operator | STATE | GRID | Contact info | Modes | EIRP | DX, km | km/W |
|--|-----------|-------|--------|--------------------------------|-----------------------|-------|--------|--------|
